Chandana Konduru

Omaha, NE, USA | +15312034748 | chandanashree97@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Product Manager with 6 years of experience driving digital transformation and SaaS product strategy in healthcare, fintech, and IoT. Skilled at translating customer needs into clear requirements and roadmaps, partnering with design, engineering, and data science to deliver unified, cross-platform solutions. Led global B2B SaaS and AI platform launches that improved user engagement and accelerated speed-to-market.

RELEVANT SKILLS

- **Product Management**: Roadmap Strategy, Agile/Scrum, Product Lifecycle Management (SDLC), PRD/User Story Development, Waterfall, Change Management, Jira, Confluence, Milestone Tracking, Stakeholder Collaboration, Curiosity
- **AI & Emerging Tech**: Agentic AI Orchestration, LLM Prompt Engineering, AI/ML Workflow Design, Conversation Flow Design
- **Data & Analytics**: SQL, Python, Power BI, Data Visualization, Application Analytics
- **Tools**: JIRA, Confluence, MS Project, Steering Decks, Risk/Issue Logs, SharePoint suite, Microsoft Office (Word, PowerPoint, Excel), OneNote
- **UX & Design Strategy**: User Research & Personas, Wireframing & Prototyping, Usability Testing, Information Architecture, Adobe Creative Suite, Figma, Sketch, UX Best Practices
- **Engineering Foundation**: C#, .NET Core, ASP.NET, RESTful API Integration, System Architecture, HTML5/CSS

WORK EXPERIENCE

ZKTeco India – Global R&D **Aug 2023 - Aug 2024**

Associate Product Manager *Bangalore, India*

Led the product strategy and digital transformation for global B2B SaaS and IoT solutions, managing diverse requirements across Nigeria, China, Mexico, and India to build a unified global application with region-specific customizations. Directed Global Transformation Projects across 4 countries; tracked Project Timelines, Budgets, and Dependencies to ensure Speed-to-Market.

- BioTime-Cloud 2.0 (Dual-Platform SaaS – Web & Mobile):
- Directed the end-to-end development of both Web and Mobile (iOS/Android) applications, ensuring feature parity and a seamless cross-platform user experience by applying UX best practices.
- Convert market demand and client feedback into clear technical requirements and user stories for Engineering and Data Science teams, collaborating closely with stakeholders.
- Global Product Strategy & Customization: Architected a unified global application framework for BioTime Cloud 2.0, managing the end-to-end roadmap and transformation vision for highly scalable platforms.
- Designed region-specific pricing management modules and custom feature sets tailored to the unique regulatory and market requirements of clients in Nigeria, China, Mexico, and India.
- Conducted statistical competitive analysis and consumer analytics to identify high-impact features, ensuring the product roadmap remained data-driven and market-responsive.
- Technical Modernization & RESTful APIs: Reduced technical debt and improved platform agility by directing the transition from legacy systems to a RESTful API architecture, increasing system performance by 5%.
- Partnered with cross-functional stakeholders in a matrixed organization to ensure products are technically sound, commercially viable, and globally scalable.
- Enhanced data-loading efficiency and future development speed by streamlining backend database integrations and technical feasibility analyses.
- Architected a Super Admin Web Dashboard featuring country-specific KPI tracking and data visualization, boosting executive decision-making confidence by 10%.
- Managed the end-to-end lifecycle-from ideation and pilot to launch and continuous optimization-for scalable B2B SaaS and AI products, leveraging curiosity to explore innovative solutions.
- Collaborated with cross-functional engineering and marketing teams to simplify T&A user flows, improving system retention rates by 5%
- ZKDigimax-ESL (IoT Retail Solution | Mobile Application):
- Acted as a Cross-Functional Liaison between hardware engineering, marketing, and retail operations to align mobile ESL solutions with multi-store corporate objectives and T&A user flows.
- Launched a one-click bulk update feature for mobile, reducing real-time pricing error rates across global stores by over 3%.
- Integrated QR/NFC scanning and digital navigation features, increasing in-store digital engagement by 2% and reducing inventory search time by 10%.
- Developed proactive monitors to identify production root causes, enhancing overall application stability before end-user reporting.
- Agile Leadership & Design Strategy: Orchestrated the Agile/Scrum process within two-week sprints, authoring comprehensive PRDs and Sprint Backlogs to accelerate speed-to-market for major updates.
- Translate high-level strategy into tangible models and prototypes, partnering with product teams to reimagine customer engagement through AI.

- Defined UX design strategies and interaction models, collaborating closely with developers to translate complex technical requirements into intuitive user interfaces.
- Led user discovery via in-store staff interviews, using Design Thinking to bridge the gap between stakeholder expectations and technical execution.
- AI Product Strategy: Lead AI product lifecycles as the 'voice of the asset,' translating complex market signals into actionable roadmaps for AI-enabled consulting solutions.

Data Foundry **Jan 2023 - Jun 2023**
UI/UX Product Designer *Bangalore, India*
Worked on the UX strategy and digital transformation for AI-powered Life Sciences and Pharmacovigilance platforms, translating complex machine learning outputs into high-performance web applications for global medical reviewers.

- DF Safety (AI-Powered Multi-Vigilance Web Platform):
- AI-Powered Product Innovation: Redesigned the Case Intake and Triage web workflow to integrate AI-powered automated case creation, reducing manual safety case processing effort by 3%.
- Established scalable design standards, frameworks, and guidelines to ensure consistency and quality across global product teams, grounded in UX best practices.
- Collaborated as a liaison between Data Scientists, ML engineers, and medical reviewers, driving stakeholder collaboration to translate complex model outputs into human-centered UI components.
- Applied Demand Science principles to the Signal Detection module, leveraging curiosity to transform complex machine learning outputs and large datasets into actionable outcomes through multi-format web dashboards.
- Designed the review interface for AI-driven recommendations regarding case seriousness and causality, focusing on minimizing friction during the web-based validation process.
- Platform Unified Strategy & Scalability: Simplified a complex multi-vigilance solution (Drugs, Vaccines, Cosmetics, and Devices) into a unified web platform, significantly improving user efficiency for Clinical Research Organizations (CROs).
- Utilized Adobe Creative Suite and Figma to deliver world-class outputs while introducing AI-driven workflows to accelerate production.
- Established a clear, unified design system for the industry's first true multi-vigilance solution, reducing user training time across four distinct safety areas within the single-instance web application.
- Authored comprehensive design specifications and wireframes for DF Safety 4.0, integrating core components like Literature Monitoring and Signal Detection into a cohesive cloud-based web platform.
- Data Visualization & Web Analytics: Led the UX design for the Signal Detection and Risk Management module, transforming large volumes of reported data into accurate, actionable outcomes through multi-format web dashboard representations.
- Utilized data visualization techniques within the Signal Management system to help web users monitor potential risks and generate regulatory signal reports collaboratively.
- Designed an intuitive web interface for automated MedDRA Auto-Coding, accelerating adverse event coding time by approximately 3%.
- Regulatory Compliance & Stakeholder Management: Ensured strict regulatory compliance (E2B R2/R3) by designing seamless web-based data import/export workflows, including bulk XML migration.
- Managed the Product and Study Configuration module, allowing enterprise customers to efficiently manage product-specific needs via the web interface, directly enhancing platform adoption.
- Redesigned Case Intake workflows to integrate AI-powered automation, reducing manual processing effort by 3% while ensuring strict regulatory compliance (E2B R2/R3).
- Coordinated with IT and business stakeholders to define interaction models and data requirements for complex safety vigilance features.
- Managed Functional Change and Digital Delivery for AI platforms, ensuring strict Regulatory Compliance and stakeholder alignment across regions.

Cybage Software Private Limited **Feb 2022 - Dec 2022**
Developer II | UI/UX Designer *Hyderabad, India*
Started with technical maintenance and feature enhancements for enterprise-level CPQ (Configure, Price, Quote) solutions, bridging the gap between complex backend logic and user-centric interface improvements.

- Experlogix (Cloud-Based CPQ Maintenance & Development):
- System Maintenance & Stability: Managed the end-to-end maintenance of the Experlogix CPQ platform, identifying root causes for production issues and providing critical code fixes to ensure high application availability.
- Feature Engineering: Managed end-to-end maintenance and feature engineering using C#, .NET, and SQL Server, implementing proactive monitors to enhance platform stability and speed-to-market for critical fixes.
- Proactive Monitoring: Engineered and implemented proactive system monitors to detect and report application issues before they impacted end-users, significantly enhancing platform stability.
- Automation & Reporting: Developed automated solutions for recurring manual support activities and generated complex data reports to streamline operational workflows.
- Agile Collaboration: Worked within an Agile framework to conduct requirement gathering in JIRA, coordinate with QA for debugging, and manage feature releases within tight sprint cycles.

NTT Data Information Processing Services **Oct 2019 - Jan 2022**
Software Engineer *Bangalore, India*

Worked on digital transformation of legacy hospitality and healthcare systems, specializing in converting complex web ecosystems into high-performance mobile-first applications.

- Wyndham Hotels & Resorts (Global Booking & B2B Franchisee Portal):
- Mobile Product Launch: Led the design and development of the mobile version of the booking application, resulting in a 5% increase in user engagement.
- Conversion Optimization: Architected a seamless hotel booking portal journey that drove a 3% increase in user conversion rates.
- B2B Financial Dashboards: Supported the Wyndham Franchisee B2B web application, delivering detailed data visualizations for hotel financials, profit/loss, and investment tracking.
- Cross-Platform Consistency: Collaborated with the web UX team to establish a unified design language, achieving consistency across different platforms.
- Led Transformation Initiatives for B2B Payment Dashboards, managing Project Scope, Risks, and Issues for global hotel financial tracking.
- Tenet Health Care (Medical Billing Web & Desktop Ecosystem):
- UX Simplification: Translated intricate medical billing processes into user-friendly interfaces, successfully reducing user confusion by 5%.
- Workflow Optimization: Conducted qualitative research and user interviews to refine medical billing flows, resulting in a 3% improvement in healthcare professional productivity.
- Task Efficiency: Designed intuitive information architectures that reduced user task completion time by 5%.
- Technical Integration: Partnered with backend database and marketing teams to achieve 50% accuracy in complex data integration across the billing platform.

PROJECTS FOR THE COMMUNITY

Scan It Know It **Jul 2025**
Omaha NE, United States

- Community-Led Requirement Gathering: Managed direct communication with community members to gather feedback and functional requirements, ensuring the application addressed specific local needs through an iterative design process.
- AI-Driven "Zero-to-One" Launch: Orchestrated the full product lifecycle for an AI-responsive app using Agentic AI (Gemini API) and vibe coding; leveraged natural language programming and AI-integrated workflows to rapidly prototype and deploy a functional data-insight platform that processes complex inputs into actionable consumer analytics.
- Human-Centered UI/UX Design: Directed the end-to-end design journey-from Figma wireframing and original branding to technical deployment-utilizing AI-assisted design to build a high-performance, mobile-first interface prioritizing intuitive navigation and responsive design for iOS and Android browsers.
- Resourceful Technical Execution: Directed the full technical stack and deployment pipeline utilizing serverless architecture and free-tier developer tools; achieved a market-ready application with $0 infrastructure costs while maintaining optimized speed and data loading efficiency.

ACADEMIC CREDENTIALS

International Institute of Information Technology, Bangalore, India **2021**
Post-Graduation, Data Science *Bangalore, India*

Madanapalle Institute of Technology & Science, JNTUA, India **2019**
Bachelor of Technology, Computer Science and engineering *India*
