PROFESSIONAL SUMMARY

AI-focused Product Analyst and Associate Product Manager with 6 years building B2B SaaS, AI-enabled, and IoT platforms across healthcare, fintech, hospitality, and retail. Experienced translating complex technical capabilities into intuitive user experiences, collaborating with engineering and data science teams in Agile environments. Hands-on with LLM prompt engineering, agentic AI workflows, and data-driven experimentation. Technical background in Python, SQL, APIs, and scalable product delivery. H4-EAD authorized; based in Omaha, NE (open to remote/hybrid US roles).

KEY SKILLS

Product & Process: Product Roadmap Planning, Requirements Gathering, PRD & User Story Writing, Backlog Prioritization, Agile/Scrum, Stakeholder Management, Jira, Confluence, MS Project

AI & LLMs: Prompt Engineering, Agentic AI Workflows, LLM Orchestration, Gemini API Integration, AI Prototyping & Automation, Natural Language Programming

UX & Product Design: User Research & Interviews, User Flows, Wireframing, Prototyping, Usability Testing, Information Architecture, Design Systems, Figma, Adobe Creative Suite

Data & Analytics: SQL, Python (Basic), Power BI, Data Visualization, Product Analytics, Dashboards

Technical Foundation: RESTful APIs, System Architecture Concepts, API Integration, C#/.NET (Foundational), HTML/CSS

PROFESSIONAL EXPERIENCE

ZKTeco India - Global R&D

Associate Product Manager | SaaS, IoT & AI Platforms

Bangalore, India | **August 2023 - August 2024**

Led product strategy for global B2B SaaS and IoT solutions across Nigeria, China, Mexico, and India, managing roadmap for enterprise platforms serving multi-national markets.

BioTime Cloud 2.0 | Dual-Platform SaaS (Web & Mobile)

- Directed end-to-end development of iOS/Android applications with web feature parity, improving cross-platform user retention through UX standardization
- Translated market demand from 4 regional stakeholders into user stories for engineering and data science teams, maintaining high sprint completion rates
- Architected unified global framework with region-specific pricing modules, accelerating time-to-market for new regions
- Migrated legacy systems to RESTful API architecture, significantly improving system performance and reducing technical debt

- Designed Super Admin dashboard with real-time country-level KPIs, enabling data-driven executive decisions

ZKDigiMax-ESL | IoT Retail Solution (Mobile)

- Liaised between hardware engineering, marketing, and retail operations to align mobile ESL features with multi-store workflows
- Shipped one-click bulk pricing update feature, reducing real-time pricing errors across global stores
- Integrated QR/NFC scanning with indoor navigation, streamlining inventory management and increasing in-store digital engagement

AI Product Innovation

- Leveraged Gemini API and agentic AI workflows to prototype AI-driven features, validated through in-store staff interviews
- Partnered with UX and Engineering to translate AI/ML requirements into intuitive workflows for biometric authentication

Data Foundry

UI/UX Product Designer

Bangalore, India | **January 2023 - June 2023**

Led UX strategy for AI-powered Life Sciences and Pharmacovigilance platforms, translating complex machine learning outputs into intuitive web applications for global medical reviewers and CRO teams.

DF Safety (AI-Powered Multi-Vigilance Web Platform)

- Redesigned Case Intake and Triage workflows to integrate AI-powered automated case creation, streamlining manual safety case processing for pharmacovigilance teams
- Collaborated as liaison between data scientists, ML engineers, and medical reviewers to translate model outputs (signal detection, causality, seriousness) into human-centered UI components and dashboards
- Architected unified UX framework for multi-vigilance solution (drugs, vaccines, cosmetics, devices), simplifying navigation and improving efficiency for global CRO users
- Led UX design for Signal Detection and Risk Management module, transforming complex datasets into actionable web dashboards for risk monitoring and regulatory reporting
- Designed intuitive interface for automated MedDRA Auto-Coding, accelerating adverse event classification workflows for clinical safety reviewers
- Ensured E2B R2/R3 regulatory compliance through seamless web-based data import/export workflows, including bulk XML migration

Cybage Software Private Limited

Developer II

Hyderabad, India | **February 2022 - December 2022**

Maintained and enhanced enterprise CPQ (Configure-Price-Quote) platform, improving reliability and usability for enterprise sales configuration workflows.

Experlogix CPQ Platform

- Managed end-to-end platform maintenance using C#, .NET, and SQL Server, resolving production issues and delivering code fixes to ensure system reliability
- Engineered proactive monitoring systems to detect application issues before user impact, improving platform stability and reducing incident response time
- Built automation for recurring support tasks and complex reporting, streamlining operational workflows and support efficiency
- Collaborated with product managers, QA teams, and engineering stakeholders in Agile/Scrum sprints to gather requirements, coordinate testing, and manage feature releases
- Translated complex backend pricing logic into simplified UI components, improving usability for enterprise sales users

NTT Data Information Processing Services

Software Engineer

Bangalore, India | **October 2019 - January 2022**

Contributed to digital transformation of hospitality and healthcare systems, focusing on mobile-first UX and data visualization for enterprise platforms.

Wyndham Hotels & Resorts (Global Booking & B2B Portal)

- Developed mobile booking application features, improving user engagement through streamlined search-to-booking flows
- Built B2B franchisee dashboards with financial visualizations (P&L, investments) for hotel performance tracking and decision-making
- Partnered with UX team to create consistent design language across web and mobile platforms

Tenet Healthcare (Medical Billing Platform)

- Simplified complex medical billing processes through intuitive UX improvements and information architecture
- Supported user research with healthcare professionals to optimize billing workflows and reduce task completion time
- Collaborated with backend teams on data integration for accurate billing platform functionality

PROJECTS

Scan It Know It | Community AI Product Recognition App

Product Lead

Omaha, NE | July 2025

Built AI-responsive product recognition application using LLM-powered workflows (Gemini API, natural language programming) and serverless architecture, achieving \$0 infrastructure costs and high recognition accuracy in structured user testing.

- Led community-driven product discovery, gathering requirements from local users through iterative feedback cycles to ensure solution-market fit
- Orchestrated zero-to-one launch using agentic AI workflows (Gemini API) and natural-language prototyping, shipping functional data-insight platform in 3 weeks

- Directed end-to-end UX journey from Figma wireframes to deployment, building mobile-first responsive interface for iOS/Android browsers
- Architected serverless technical stack using free-tier developer tools, delivering market-ready application with optimized speed and data loading efficiency

EDUCATION

International Institute of Information Technology (IIIT) | **Post-Graduation, Data Science** | Bangalore, India | 2021

Madanapalle Institute of Technology & Science (JNTUA) | **Bachelor of Technology, Computer Science & Engineering** | Andhra Pradesh, India | 2019
